

## Eliminate Dirty Pans and Unexpected Overflows

EPA Registered #59682-1 04/05/2022

Algae Guard is a time-release biocide effective against the growth of fungi, mildew, slime, algae, and odor causing bacteria\*

- Time-Release Biocide
- Water Activated
- Continual Cleaning
- Non-Dissolving Polymer Core
- Long Lasting Coverage
- Eliminates Odors

Algae Guard is a preventative treatment that's easy to use. Place the strip in the drain pan, and it does all the work.

When water contacts the strip, non-dissolving Algae Guard releases a small amount of biocide that continually cleans pans and drain lines

Algae Guard effectively prevents buildup, clogging, overflows, and odors too.

Algae Guard is available in over a dozen tonnage based sizes, for accurate cleaning strength.

Each Algae Guard strip lasts for 3 to 6 months, depending on size.

### For Use in the Drain Pans of:

- AC units
- Coolers
- Refrigerators
- Ice Machines
- Overhead Air Units\*\*

\*This Product is only effective against odors and discoloration due to the staining only by bacteria and other microorganisms. This product is not effective against public health organisms that cause diseases.

\*\*Not for use in liebert units

# Technical Data

## Performance

Algae Guard is a polymer core strip covered by a blue knit enclosure. When the strip encounters water, it releases biocide that keeps pans and drain lines clean. During points when no water is present, the strip retains its ingredients.

## Algae Guard is size by tonnage

- "R" type will keep a pan clean for 3 months
- "H" type will keeps a pan clean for 6 months
- "Commercial Size" will keeps a pan clean for 3 months

## Algae Guard

- Stops microbial growth and keeps pans clean
- Keeps drain lines clear and water flowing freely
- Eliminates Overflows
- C10 Corrosion inhibitor: helps slow the corrosive effects of harsh water
- Controls Odors
- 32% Biocide
- 18% other ingredients: blending of wetting agents, surfactants, detergents, and corrosion inhibitor
- Non-dissolving, leaves no chemical residue in the pan
- Non-volatile, will not travel throught the air stream

## Physical characteristics

The thin long strip design of Algae Guard covers a greater portion of the surface area, aiding in the distribution of biocide to the entire pan. The design also makes it easy to fit in tight places. It remains the same size and weight in water, which keeps it from floating away. The bright knit enclosure keeps the polymer core intact and visible for easy removal.
