

Roll on Metal Resurfacer for Vertical Surfaces

V570 stands up to harsh environments

- Corrosion proof
- High performance surface protector
- High adhesion to vertical, curved or uneven metal, concrete, plastic, copper or stainless steel.
- Resistant to harsh cleaning chemicals
- Water resistant

Small pinholes are a severe corrosion indication

- V570 can seal tiny pinholes up to 25 mils in diameter, eliminating condensate leakage and reducing further deterioration.

Before

After

Use with Pancrete to fully restore HVAC surfaces and drain pans.

What's the difference between Pancrete and V570?

V570 and Pancrete share the same corrosion and water resistance.

However when mixed Pancrete has a consistency of water in order to self level on horizontal surfaces.

V570 is thicker when mixed, allowing it to be rolled or brushed onto vertical surfaces.

Coat drain pans with V570 prior to pouring pancrete for the ultimate protection and cleanability.

Protect Investments from the Start. Coat new equipment with V570 to prevent corrosion.
